Swiss human rights under fire

Switzerland has come under pressure from the human rights watchdog Amnesty International, in particular the country's laws on asylum and migrants. In a close-up on Switzerland, Amnesty experts say there are more and more restrictions on the rights of migrants in this country, citing for example legislation on their right to social benefits, and even to get married. The report also called for better protection of victims of domestic violence, urging better police training and greater legal support, in particular for women.
